1. There is a set of requirements, please write test cases that would cover these requirements.

- Users should be able to login if provided valid credentials. Users should not be able to login if credentials are invalid.
- Users should be able to login using SSO with Google accounts. In case the user doesn't exist in the system yet, the Member role should be assigned automatically. If the user with the same email exists in the system, no other role should be assigned automatically if SSO login is used. Note: During SSO login feature using, the user should provide valid email & pass for the chosen account. We have only Google SSO implemented so it means, credentials from Google acc should be valid. However, this validation is implemented on Google side not directly in our application.
- Users that have more than 100\$ on account balance should see an ad on the homepage.
- Only users with role "Handler" should have access to the "Coverage" feature.
- Only users with role "Member" should have access to the "Shop" feature.
- Main body of the page is a list of search results. Search results could be filtered and sorted by name. Default sorting is by date created.

UI Details

- Login page is a usual one e.g. it has fields login, password and button login. In addition, there
 is a "Login with SSO" button.
- Home page has a sidebar that provides access to different features such as "Coverage" like
 on the attached image.
- Search results have one text field where the user can input values to filter by. Sorting is done
 by pressing on the column header.

2. During testing, some issues were found. Please create bug reports for these issues providing as much information as you would provide to an actual bug report. Mind the system allows the user to work with each feature via API as well so bugs may appear both in UI and API – you need to decide how you will describe the problem clearly enough to understand where it should be fixed.

Note: Providing mocks is also possible if you do not have the way to provide the actual stuff. **Note (2):** For cases 2-4, that's necessary to provide exhaustive information about the root cause of the faced problem (such as any API requests attached for demonstrating where the issue happened (just a sample one with your own comments/notes), or some additional steps to understand the problem is only UI related, etc).

- After accessing a feature\page, a 404 error is returned.
- Users with a role Member can access the feature "Coverage."
- Users with a role Handler can not access feature "Coverage" from the sidebar, but can access the feature through the interface on the home page body.
- User sees a wrong calculated amount to pay for elements added to the cart.
- Side bar has invalid color when opening the app as a user with the role "Handler".

1. UI, IT_Testspec Total cases: 28

17	Shop page	Screen Function	Verify that the behavior of Search results are are correct		input value to text field click to column header Observe behavior of screen	Verify that the data on table search results is filtered by inputed value Verify that the data on table search results is sorted correctly by clicked column	

3. Issues List

ssues l	<u>-ist</u>				
	Issue Summary	Cause, Level - Scope of impact	Issue Ticket	Severity	Notes
	After accessing a feature\page, a 404 error is returned.	[initial guess] below are some possible causes, need to be provided more about steps, environment, or evidence to reproduce and define the cause . The URL used to access the feature or page might be mistyped or outdated (cache, cokies issue) There might be issues with the backend server, such as database, network connection problems or server downtime, the requested resource is moved There might be a permissions issue. The user accessing the feature or page might not have sufficient permissions to view it Example Issue: login user with role "Member", specify url of Coverage page to view it. Missing process in code of Coverage page: if role of login user is not role "Handler", it should be redirected to Authority error page	[Issue Subject] Member role user login, specify url of Coverage page, a 404 error is returned instead of Authority error page [Reproduce Steps] 1. Login with Member role user 2. specify url of Coverage page on URL bar of browser, press Enter 3. a 404 error page is displayed (NG) [Expected Results] in step 3. Authority error page should be displayed	GOVERN	Notes
2	Users with a role Member can access the feature "Coverage."	Example Issue: Issue in Front End side of Home Page (body), Sidebar, Coverage. Button/link, the Coverage page of the feature "Coverage" should only displayed if role of login user that returned from api is Handler	[Issue Subject] Users with a role Member can access the feature "Coverage." [Reproduce Steps] 1. Login with Member role user 2. On Sidebar, clicking button [Pages] > [Coverage] or click link/button [Coverage] on Home Page or specify url in URL bar of browswer 3. Coverage page is opened (NG) [Expected Results] in step 2. On Sidebar, Home Page body: button/link [Coverage] should not be displayed in step 3. Coverage page should be displayed, it shoud be redirected to Authority error page [Scope of impact] Home Page, Sidebar, Coverage page		
3	Users with a role Handler can not access feature "Coverage" from the sidebar, but can access the feature through the interface on the home page body.	Example Issue: On Sidebar, clicking button [Pages], [Coverage] is diplayed, but if clicked, nothing is happen	[Issue Subject] Not yet handle click event for button [Coverage] on sidebar [Reproduce Steps] 1.
